# Gorre Dinesh Chandan Reddy

7416767453
gorredinesh21@gmail.com linkedin.com/in/dinesh github.com/gorredinesh21

## Education

- **Indian Institute of Technology (ISM) Dhanbad** Dec 2021 – May 2025
  *Bachelor of Technology in Computer Science* *Dhanbad, Jharkhand*
  – Relevant Coursework: Data Structures and Algorithms (C++), Object-Oriented Programming System(OOPS), Database Managment System(DBMS), Software Engineering,Computer Networks,Deep Learning
  – Machine Learning
  – Data Science

## Experience

- **Graduate Engineer Trainee (Data/AI Engineer)** Aug 2025 – Present
  *Reliance Industries Ltd.* *Mumbai, India*
  – Working on end-to-end Data Engineering and Applied AI projects, including ML model development, data pipelines,and LLM-based solutions.
  – Built RAG (Retrieval-Augmented Generation) systems using vector databases such as ChromaDB, text splitters, retrievers, and Hugging Face LLM API integration.
  – Developed multiple ML pipelines including regression models, neural networks, entity extraction, and unit-value mapping using NLP.
  – Implemented production-grade Python backends, optimized prompt pipelines, and contributed to internal AI tools and automation workflows.
- **Backend/AI Intern** Apr 2024 – May 2024
  *Pepsales* *Bengaluru, India*
  – Pepsales is an AI platform that enables B2B SaaS sales teams to generate personalized product demos for prospects.
  – Created the Flask application and hosted it on AWS EC2.
  – Utilized Artificial Intelligence and Machine Learning techniques to develop predictive models and improve sales processes.

## Projects

- **Image-Based Entity Extraction with PyTesseract** | *Python, PyTesseract, os, pandas*
  | **Repository:**IEE
  – Successfully employed OCR technology to extract key information (weight, volume, etc.) from product images.
  – Achieved 56% accuracy on the test dataset: Demonstrated model effectiveness in extracting relevant data despite image quality challenges.
  – Processed a large dataset: Successfully handled a significant dataset of 130,000 test images, extracting information from 68,000 images and identifying potential challenges in 55,000 images.
  – Leveraged NLP techniques to improve entity extraction accuracy.
- **Mars Landmark Detection System** | *Python, TensorFlow, Keras*
  | **Repository:**MLDS
  – Developed an end-to-end deep learning project using TensorFlow and Keras to detect landmarks in images of Mars.
  – Trained a model to classify images into eight classes representing various Martian landmarks, such as craters, valleys, mountains, and plateaus.
  – Handled over 8,200 training images and 2,000 testing images, achieving an accuracy of 89% on the test dataset.
  – Utilized computer vision techniques to improve landmark detection accuracy.

## Technical Skills

- Languages: C, C++, Python, SQL
- Technologies: Agentic AI, PySpark, Databricks, Azure Data Factory, Azure, GenAI, OpenCV, NLP, MLOps, Scikit-learn, Keras, PyTorch, TensorFlow, Git, Machine Learning, Data Science, Deep Learning, Artificial Intelligence
- Concepts: Data Structures and Algorithms, OOPS, Machine Learning, Data Science, Deep Learning, Explainable AI, Operating Systems, Agile/Scrum, Computer Vision, Natural Language Processing

## Achievements

- JEE Advanced Rank - 2903
- JEE Mains Rank - 4616
- Amazon ML Challenge - Top 200 out of 18500 teams
- Hackfest IIT Dhanbad participant
